Education

Stevens Institute of Technology, Hoboken NJ

Expected 05/2027

Bachelor of Science in Computer Science

Minor in Data Visualization

Courses: Data Structures & Algorithms, Databases, Discrete Structures, Systems Programming, Computer Architecture

Projects

FullSquadGaming | [Github](#)

April 2025

- Developed a full-stack gaming website and integrated Discord bot using Python and Flask, enabling players to seamlessly create and manage tournaments, schedule events, track results, and engage with their community.
- Built automated scheduling, authentication, and database storage supporting hundreds of players
- Designed responsive HTML/CSS front end integrating game stats, leaderboards, and UI

QuackTask | [Github](#) | [Chrome Store](#)

March 2025

- Built Chrome extension syncing Canvas assignments with Google Tasks to streamline coursework
- Implemented OAuth2 with the Google API to securely authorize users and integrate Canvas data into Google Tasks, handling token refresh flows and ensuring automatic fetching, synchronization, and consistent task updates.
- Built an intuitive UI with persistent storage and background scripts to ensure tasks remain synced across sessions.

SpotiSync | [Github](#)

January – February 2025

- Developed a browser extension to download YouTube audio and automatically import MP3 files into a Spotify folder.
- Implemented ffmpeg.wasm for efficient in-browser audio conversion directly inside the Chrome extension, enabling YouTube audio to be processed into MP3 files locally while ensuring cross-platform compatibility.
- Designed flows for folder selection, Spotify login & scraping with smooth, persistent UI

EventBuddy | [Github](#)

November 2024

- Built Discord-only event planner using API (slash commands, buttons, modals) with no external UI
- Implemented event creation, RSVP, auto channel/thread setup, and scheduled reminder pings/DMs
- Built a lightweight datastore to persist events and attendance, incorporating role-based organizer permissions with detailed audit and log messages to ensure accountability, clarity, and reliable management across Discord servers.

KeyScraper | [Github](#)

October 2024

- Engineered a Python web-scraping pipeline for the GeekHack forum using Playwright and BeautifulSoup, designed to extract structured datasets at scale with pagination support, error handling, and resilience against anti-bot measures.
- Implemented pagination handling, duplicate detection, and multi-threaded saving to optimize performance.
- Built filters to quarantine malformed data & renumber JSON, ensuring consistent datasets.

Skills

Languages: Python, Java, C++, C, Scheme, Assembly, HTML, CSS, JavaScript

Technologies: React, Node.js, Express.js, Flask, Electron, Tailwind CSS, Playwright, BeautifulSoup, Selenium, ffmpeg.wasm, Docker, PostgreSQL, MongoDB

Tools: Git, Bash, Docker, Blender, Adobe Photoshop, Source Filmmaker, KiCad

Work Experience

CVS Pharmacy | Bernardsville NJ

Front Store Associate

February 2021 – August 2025

- Provided exceptional customer service by promptly addressing inquiries, resolving issues efficiently, and maintaining clear communication to ensure every customer enjoyed a positive, reliable, and supportive shopping experience.
- Developed strong communication and interpersonal skills with assisting a diverse customer base.
