Education

Stevens Institute of Technology, Hoboken NJ

Expected 05/2027

Bachelor of Science in Computer Science | **GPA: 3.46**

Minor in Data Visualization

Courses: Data Structures & Algorithms, Databases, Discrete Structures, Systems Programming, Computer Architecture

Work Experience

PsycheCare | Virtual

December 2025 – January 2026

Software Engineer Intern

- Spearheaded development on an existing Behavioral Health CRM, leading all subsequent development, architectural decisions, and long-term technical direction spanning data architecture, access control, and complex state-driven application logic.
- Redesigned Firestore data models and security rules with **HIPAA-aligned** safeguards, implementing role-based permissions, **least-privilege access**, and auditable clinical record handling across sensitive workflows.

OpenReferral | Stevens Institute of Technology, Hoboken NJ

September 2025 – January 2026

Software Developer

- Developed large-scale data transformation and validation pipelines for **HSDS** datasets, processing thousands of service records across organizations into consistent, standardized, machine-readable formats.
- Enforced automated HSDS validation tooling at scale, detecting schema violations, missing fields, and structural inconsistencies to ensure consistent, reliable data quality prior to downstream ingestion.

Research | Stevens Institute of Technology, Hoboken NJ

May 2025 – September 2025

Research Assistant

- Architected and deployed a parallelized AWS-based scraping pipeline that collected and processed **10,000+ AWS IAM policy pages in under 3 hours**, enabling large-scale research on automated policy repair.
- Implemented high throughput scraping workflows in Python using Playwright and BeautifulSoup, with concurrency controls, **pagination** handling, and aggressive de-duplication to maximize speed and coverage.

Projects

FullSquadGaming | [Github](#)

April 2025

- Engineered a full-stack web application and integrated Discord bot using **Python** and **Flask**, enabling players to create and manage tournaments, schedule events, track results, and engage with their community.
- Implemented automated scheduling, authentication, and database storage systems supporting **500+ players**, handling tournament lifecycle management, persistent user state, role-based access, and reliable event coordination at scale.

QuackTask | [Github](#) | [Chrome Store](#)

March 2025

- Launched a Chrome extension that synchronizes Canvas assignments with Google Tasks via the Google Tasks API, providing persistent background syncing, automatic task updates, and a streamlined workflow used by dozens of students.
- Integrated OAuth2 with the Google **OAuth2** API to securely authorize users and connect Canvas data to Google Tasks, handling token refresh flows and ensuring reliable synchronization and consistent task updates.

KeyScraper | [Github](#)

October 2024

- Constructed a Python web-scraping pipeline for the GeekHack forum using **Playwright** and **BeautifulSoup**, to extract **2,500+** structured posts at scale with **pagination** support, error handling, and resilience against anti-bot measures.
- Introduced pagination handling, duplicate detection, and multi-threaded saving, **boosting efficiency by 70%**.

Skills

Languages: Python, Java, C++, C, Scheme, Assembly, HTML, CSS, JavaScript

Technologies: React, Next.js, Node.js, Express.js, Flask, Tailwind CSS, TypeScript, JavaScript, Python, PostgreSQL, MongoDB, Firebase (Auth, Firestore, Storage), Playwright, Selenium, BeautifulSoup, Git, Linux, Stripe API, Google APIs, D3.js, Matplotlib

Tools: Git, Bash, Docker, Blender, Adobe Photoshop, Source Filmmaker, KiCad, VSCode, Figma
